

11 - Content Management System (CMS)

Triads Future

CMS Architecture & Administration Guide

Version: 1.0

Status: Locked

Purpose

The Content Management System (CMS) allows the Triads Future team to manage the website without requiring technical knowledge.

The CMS should be:

- Fast
- Clean
- Easy to understand
- Focused on productivity

The public website showcases the business.

The CMS manages the business.

CMS Objectives

The CMS should enable administrators to:

- Manage website content.
- Manage appointments.
- Publish insights.
- Update portfolio projects.
- Manage testimonials.
- Update FAQs.
- Maintain company information.
- Keep the website current.

The CMS is intentionally lightweight for Version 1.

User Roles

Version 1

Only one administrator account.

Future versions may introduce:

- Super Admin
- Editor
- Content Manager
- Marketing Team

For Version 1, role management is intentionally excluded to reduce complexity.

CMS Navigation

Dashboard

Appointments

Work

Insights

Testimonials

FAQs

Media Library

Website Settings

Profile

Logout

The navigation should remain consistent across all CMS pages.

CMS Philosophy

The CMS is designed around one principle:

Complete every task in as few clicks as possible.

Avoid unnecessary screens, nested menus or complicated workflows.

Dashboard

Purpose

Provide a quick overview of website activity.

The Dashboard is **not** an analytics page.

It exists to answer:

What requires my attention today?

Dashboard Cards

- Total Strategy Call Requests
 - Total Published Projects
 - Total Published Articles
 - Total Testimonials
 - Total FAQs
-

Recent Activity

Display recent actions such as:

- New appointment received
 - Blog published
 - Project updated
 - Testimonial added
-

Quick Actions

Provide one-click access to:

- Add Project
 - Publish Article
 - Add Testimonial
 - Add FAQ
-

Appointments

Purpose

Manage incoming Strategy Call requests.

Appointment Fields

Required

- Name
- Phone Number

Optional

- Business Name
- Preferred Contact Method
- Preferred Contact Time
- Service Interest

System Generated

- Date Submitted
 - Status
 - Notes
-

Appointment Status Workflow

New

↓

Each appointment should maintain a complete history.

Appointment Actions

- View
 - Edit
 - Add Internal Notes
 - Update Status
 - Delete
-

Work Management

Purpose

Manage portfolio projects.

Each project contains:

- Project Title
- Client Name
- Industry
- Cover Image
- Challenge
- Strategy

- Solution
 - Results
 - Gallery
 - Testimonial
 - Featured
 - Publish Status
-

Available Actions

- Create
 - Edit
 - Draft
 - Publish
 - Delete
-

Insights Management

Purpose

Manage all published articles.

Each article includes:

- Title
 - Slug
 - Featured Image
 - Category
 - Tags
 - Content
 - Meta Title
 - Meta Description
 - Publish Status
-

Actions

- Draft
 - Preview
 - Publish
 - Update
 - Delete
-

Testimonials

Manage client feedback.

Fields

- Client Name
- Company
- Designation
- Photo
- Review
- Rating
- Featured

Actions

- Add
 - Edit
 - Publish
 - Delete
-

FAQ Management

Fields

- Question
- Answer
- Category
- Display Order
- Publish Status

Actions

- Add
 - Edit
 - Delete
-

Media Library

Purpose

Centralized media management.

Supported

- Images
- Videos
- Documents

Functions

- Upload
- Replace
- Delete
- Search
- Preview

Future versions may include folders and cloud storage.

Website Settings

Manage global website information.

Includes

- Logo
- Favicon
- Company Description
- Phone Number
- Email
- Address
- Social Links
- Footer Content
- Business Hours

These settings automatically update across the website.

Profile

Administrator settings.

Includes

- Name
- Email
- Password

- Profile Photo
-

Logout

Secure session termination.

Search

The CMS should provide search functionality where appropriate.

Search should support:

- Projects
 - Articles
 - Testimonials
 - FAQs
-

Validation

Every form should validate:

- Required fields
- Image uploads
- Duplicate slugs
- Empty content

Display friendly error messages.

Notifications

Examples

Project Published Successfully

Appointment Updated

Changes Saved

Avoid intrusive pop-ups.

Use lightweight toast notifications.

Security

Version 1 Requirements

- Secure Login
 - Password Hashing
 - Protected Routes
 - Session Management
 - CSRF Protection (if applicable)
 - Input Validation
 - File Upload Validation
-

Performance

The CMS should:

Load quickly.

Use pagination.

Lazy-load images.

Minimize unnecessary requests.

Responsive Behaviour

Although primarily desktop-oriented, the CMS should remain usable on tablets and mobile devices.

Administrators should still be able to:

- Approve appointments
- Publish articles
- Update projects

from a mobile device if necessary.

Future Modules

Not included in Version 1.

Possible future additions:

- Growth Analytics
- CRM
- Proposal Builder
- Email Campaigns
- Team Accounts
- Activity Logs
- Calendar Integration
- Google Analytics
- Search Console
- AI Insights
- WhatsApp Automation

The CMS architecture should allow these modules to be added later.

Success Criteria

Version 1 is successful if administrators can:

- Manage all website content.
- Handle appointments efficiently.
- Publish articles.
- Update projects.
- Manage testimonials.
- Update FAQs.
- Maintain website information.

without requiring developer assistance.

Things To Avoid

Do not:

Build unnecessary dashboards.

Overcomplicate workflows.

Duplicate settings.

Hide important actions.

Require multiple clicks for common tasks.

Add features without a clear business purpose.

Final Principle

The CMS should feel like a professional business tool.

Administrators should spend less time managing the website and more time growing the business.

Every feature should contribute to efficiency, clarity and long-term scalability.
