

16 - Decision Log

Triads Future

Product Decisions & Design Rationale

Version: 1.0

Status: Locked

Purpose

This document records every major product, UX, design and engineering decision made during the planning phase of the Triads Future website.

The purpose of this document is to:

- Preserve design intent.
- Prevent unnecessary redesigns.
- Explain why decisions were made.
- Maintain consistency during development.
- Help future developers understand the project.

This document should be updated whenever a significant product decision is approved.

Decision 001

Website Positioning

Decision

Triads Future will be positioned as a **Business Growth & Technology Partner** rather than a traditional marketing agency.

Reason

Business owners purchase business outcomes, not marketing services.

This positioning creates a stronger long-term brand and supports future expansion into consulting, automation and software.

Status: Approved

Decision 002

Navigation Structure

Decision

Primary navigation will be:

- Home
- Solutions
- Work
- Insights
- About
- Contact

Reason

Simple navigation reduces decision fatigue and reflects how business owners naturally explore a company's website.

Status: Approved

Decision 003

Solutions Instead of Services

Decision

Use **Solutions** rather than **Services**.

Reason

Visitors think in terms of solving problems, not purchasing individual services.

Outcome-focused language better aligns with Triads Future's positioning.

Status: Approved

Decision 004

Work Instead of Portfolio

Decision

Use **Work** rather than **Portfolio**.

Reason

"Work" emphasizes business outcomes and real projects rather than a visual gallery.

Status: Approved

Decision 005

Insights Instead of Blog

Decision

Use **Insights** rather than **Blog**.

Reason

The objective is to establish authority through valuable business knowledge, not simply publish articles.

Status: Approved

Decision 006

Contact Strategy

Decision

Encourage visitors to book a **Strategy Call** instead of completing a traditional enquiry form.

Reason

Reducing friction increases conversion while creating a more personal experience.

The first interaction should feel like a conversation, not paperwork.

Status: Approved

Decision 007

Homepage Philosophy

Decision

The homepage tells a business story rather than presenting a list of services.

Reason

Storytelling builds emotional engagement and trust more effectively than feature lists.

Status: Approved

Decision 008

Trust Before Selling

Decision

Every page must build trust before encouraging action.

Reason

Business owners are more likely to contact companies they trust than companies that simply advertise aggressively.

Status: Approved

Decision 009

Partnership Positioning

Decision

Triads Future should be presented as a long-term partner rather than a one-time vendor.

Reason

Long-term relationships align with the company's business philosophy and create stronger differentiation.

Status: Approved

Decision 010

Desktop ≠ Mobile

Decision

Desktop, tablet and mobile experiences should be intentionally designed rather than simply resized.

Reason

Each device is used differently.

Optimizing each experience independently improves usability.

Status: Approved

Decision 011

Mobile Experience

Decision

The mobile experience should prioritize reduced scrolling, larger touch targets and simplified layouts.

Reason

Most visitors access business websites from mobile devices.

The experience should feel purpose-built rather than compressed.

Status: Approved

Decision 012

CMS Instead of Static Website

Decision

The website will include a Content Management System.

Reason

The client should be able to manage content independently without requiring developer assistance.

Status: Approved

Decision 013

Dashboard Philosophy

Decision

The CMS Dashboard provides only a summary and quick actions.

Analytics are intentionally excluded from Version 1.

Reason

The dashboard should support immediate actions rather than detailed reporting.

Analytics can be introduced after sufficient data exists.

Status: Approved

Decision 014

Design Language

Decision

Use a monochrome interface with imagery providing natural colour.

Reason

A restrained design feels more premium and allows client work to become the visual focus.

Status: Approved

Decision 015

Animation Philosophy

Decision

Animations should support communication rather than decoration.

Reason

Purposeful motion improves usability without distracting visitors.

Status: Approved

Decision 016

CMS Architecture

Decision

Version 1 includes only the essential content management modules.

Reason

Reducing scope ensures a stable and maintainable initial release while allowing future expansion.

Status: Approved

Decision 017

Development Strategy

Decision

Version 1 focuses on quality, maintainability and scalability instead of feature quantity.

Reason

A polished foundation is more valuable than an unfinished feature-rich product.

Status: Approved

Decision 018

Future Expansion

Decision

Future features such as Analytics, CRM and Automation are intentionally deferred.

Reason

These features require real usage data and would unnecessarily increase the complexity of Version 1.

Status: Approved

Decision 019

Documentation First

Decision

Complete planning and documentation before writing production code.

Reason

Clear documentation reduces development uncertainty and improves project quality.

Status: Approved

Decision 020

Overall Product Philosophy

Decision

Build a business platform rather than a traditional marketing website.

Reason

The website should become the foundation of Triads Future's long-term digital presence and future growth.

Status: Approved

Document Maintenance

Every major future decision should be added to this document.

Each entry should include:

- Decision
 - Reason
 - Status
 - Date (optional)
 - Version (optional)
-

Final Principle

Every design choice, UX decision and engineering decision should have a clear purpose.

If a decision cannot be explained, it should be reconsidered.

A successful product is built through intentional decisions—not accidental ones.
