

12 - Design Language System

Triads Future

UI / UX Design Standards

Version: 1.0

Status: Locked

Purpose

This document defines the visual language, interaction patterns and design standards used throughout the Triads Future website.

Every page should feel like part of the same product.

Consistency is more important than decoration.

If a future design decision conflicts with this document, this document takes priority.

Design Philosophy

The website should feel:

- Premium
- Modern
- Professional
- Human
- Confident
- Timeless

The experience should never feel:

- Template-based
- Generic
- AI-generated
- Corporate
- Over-designed
- Trend-chasing

The objective is quiet confidence.

Design Principles

Every design decision should support one or more of these principles:

- Simplicity
- Readability
- Trust
- Clarity
- Balance
- Purpose

If an element exists only for decoration, reconsider it.

Brand Feel

The experience should communicate:

We understand business.

Not

Look how modern our website is.

The design should reinforce competence rather than seek attention.

Visual Identity

Primary Theme

Minimal monochrome foundation.

Black, white and neutral tones create consistency and professionalism.

Accent colours should come naturally from:

- Photography
- Brand assets
- Portfolio imagery

- Client work

The interface itself should remain restrained.

Typography

Typography is one of the strongest visual elements.

Requirements

- Highly readable
- Strong hierarchy
- Comfortable line length
- Generous spacing

Typography should create confidence before colour does.

Typography Philosophy

Large headings.

Comfortable body text.

Minimal font variations.

Never sacrifice readability for style.

Spacing System

Whitespace is part of the design.

Every section should have room to breathe.

Avoid:

Crowded layouts.

Tiny margins.

Uneven spacing.

Spacing should create rhythm throughout the website.

Grid System

Desktop

Use a structured multi-column layout.

Tablet

Adapt layouts while preserving visual hierarchy.

Mobile

Purpose-built layouts rather than compressed desktop sections.

Every breakpoint should feel intentionally designed.

Desktop Philosophy

Desktop users expect exploration.

Take advantage of available space.

Use:

- Larger imagery.
- Editorial layouts.
- Rich visual hierarchy.
- Generous spacing.
- Multi-column composition.

Desktop should feel immersive without becoming cluttered.

Tablet Philosophy

Tablet acts as a bridge between desktop and mobile.

Requirements

- Simplified layouts.
- Comfortable touch interactions.
- Balanced spacing.
- Flexible grids.

Tablet should not simply inherit either desktop or mobile layouts.

Mobile Philosophy

Mobile is not a smaller desktop.

It is a different experience.

Design priorities:

- Faster scanning.
- Reduced scrolling where possible.
- Larger touch targets.
- Simplified layouts.
- Prioritized content.
- Thumb-friendly interactions.

The mobile experience should feel purpose-built.

Responsive Philosophy

Each breakpoint should answer the question:

How would someone naturally use this device?

Adapt:

Layout

Spacing

Typography

Navigation

Content order

Interaction

Do not simply resize elements.

Navigation

Desktop

Sticky navigation.

Clear hierarchy.

Contact CTA always visible.

Mobile

Simple navigation.

Fast access.

Minimal steps.

Avoid complicated nested menus.

Buttons

Buttons should communicate confidence.

Primary

High contrast.

Clear label.

Consistent size.

Secondary

Minimal.

Supporting actions only.

Avoid excessive button styles.

Cards

Every card should follow the same visual language.

Requirements

Consistent spacing.

Clear hierarchy.

Comfortable padding.

Subtle elevation.

No unnecessary decoration.

Cards should feel lightweight.

Forms

Forms should reduce effort.

Use:

Large inputs.

Clear labels.

Helpful validation.

Logical grouping.

Avoid unnecessary fields.

Every form should feel approachable.

Icons

Use icons only when they improve understanding.

Avoid decorative icons.

Consistency is more important than quantity.

Images

Prioritize authenticity.

Preferred

- Real team photos.
- Client work.
- Office environment.
- Behind-the-scenes.

Avoid overused stock photography.

Images should reinforce trust.

Motion System

Motion exists to guide attention.

Allowed

Fade

Reveal

Slide

Scale (subtle)

Hover

Micro interactions

Avoid

Large parallax effects.

Long loading animations.

Continuous movement.

Decorative animation.

Motion should support understanding.

Scroll Behaviour

Scrolling should feel smooth.

Each section should naturally lead to the next.

Avoid abrupt transitions.

Content rhythm should encourage continued exploration.

Accessibility

The website should remain accessible.

Requirements

Readable contrast.

Keyboard navigation.

Visible focus states.

Semantic HTML.

Alt text.

Proper heading hierarchy.

Readable font sizes.

Accessibility is part of quality.

Loading Experience

Avoid unnecessary loading screens.

Use lightweight skeletons only when required.

The website should feel fast.

Performance is part of the design.

Content Width

Do not stretch text across the entire screen.

Maintain comfortable reading width.

Reading should remain effortless.

Visual Rhythm

Alternate layouts to maintain interest.

Example

Image Left

Image Right

Centered Content

Grid

Full Width

Avoid repeating identical layouts for long periods.

Component Standards

Every reusable component should follow a shared design language.

Examples

- Navbar
- Footer
- Buttons
- Cards
- Forms
- Testimonial Cards
- Solution Cards
- Project Cards
- Blog Cards
- FAQ Accordion

One visual language.

One interaction language.

Animation Timing

Animations should feel:

Fast.

Responsive.

Natural.

Avoid delayed animations that interrupt browsing.

Premium Experience Checklist

Every page should feel:

- ✓ Calm
- ✓ Confident
- ✓ Professional
- ✓ Human
- ✓ Intentional
- ✓ High quality

Never:

- Loud
 - Flashy
 - Distracting
 - Overcrowded
-

Mobile Experience Checklist

Before approving any page ask:

- Does this feel intentionally designed for mobile?
 - Could content be simplified further?
 - Can scrolling be reduced?
 - Are tap targets comfortable?
 - Would a business owner complete this on their phone?
-

Desktop Experience Checklist

Before approving any page ask:

Does the page use available space effectively?

Is whitespace balanced?

Does the layout feel premium?

Is reading comfortable?

Does the hierarchy guide attention naturally?

Final Design Principle

People should remember how the website made them feel.

Not individual colours.

Not animations.

Not components.

If visitors leave thinking:

"Triads Future feels professional, trustworthy and easy to work with."

then the design language has achieved its purpose.
